The smart way to strengthen IT governance

⚡ Automated Discovery

Use our proprietary Agent to report daily on your online assets. Extract data from your existing applications, such as Intune, JAMF, Google, and AWS, or use Network Discovery.

No-code Automations

Set up routine checks, policy plans, and proactive alerts to reduce manual intervention. Reduce time and schedule reports to automate reporting.

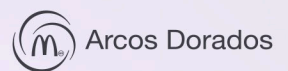

No-code data architecture

Categorize assets based on health status, warranty or usage. Assign roles and permissions dynamically using condition-based tags to control access and enforce policies.

Connect your stack
with 25+ integrations

The choice of strategic teams

Automated asset discovery

Track and manage every stage of your assets' lifecycle - from acquisition to retirement - with smart automation and instant insights through Smart Search.

Daily traceability and visibility

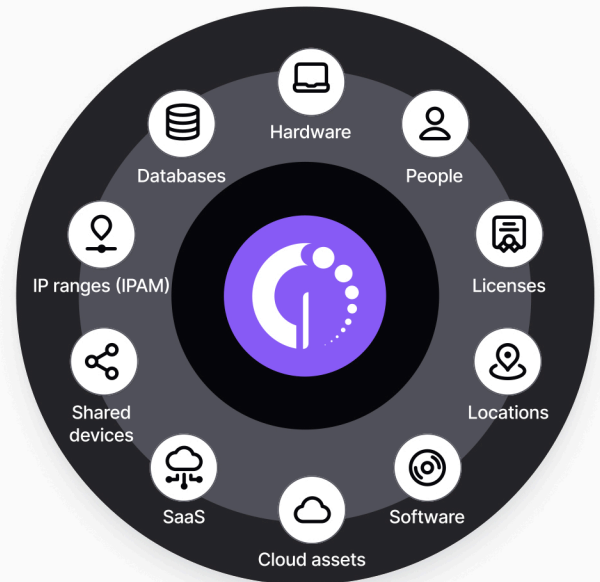

Easily maintain an organized and up-to-date view of all assets across your environment. Smart Search allows you to locate assets by user, location, or status within seconds.

Optimized IT spend

Gain financial clarity and control with automated depreciation and budget insights that support strategic cost optimization.

Unified IT into one platform

Leverage native integrations with InvGate Service Management and other Service Management tools for a unified experience across asset and ticketing workflows.
